TISSUE SPECIFICITY: STRONGLY EXPRESSED IN SPLEEN AND LUNG. ALD TISCTED IN BRAIN AND THYMUS. IN THE LUNG, EXPRESSED IN THE DITECTED IN BRAIN AND IN CHERTAIN, EXPRESSED IN THE PURKINJE OF THE CEREBELLUM AND IN CERTAIN LAYERS OF NEURONS IN THE HIPPOCAMPUS. ALSO DETECTED IN CELLS FILLING THE SPACE WITHIN INTESTINAL VILLUS.

SIMILARITY: BELONGS TO THE PEPTIDOGLYCAN RECOGNITION PROTEIN
                                                                                                                                                                                                                                                                                                                                            SWISS-PROT entry is copyright. "Sequence of bacteriophage T3 DNA from gene 2.5 through gene 9.";

J. Mol. Biol. 210:687-701(1989).

"I FUNCTION: THIS PROTEIN IS NOT REQUIRED FOR LYSIS BUT PLAYS AN IMPORTANT ROLE IN DNA SYNTHESIS. IT IS KNOWN TO DETACH THE HOST CHROMOSOME FROM THE BACTERIAL MEMBRANE TO WHICH IT IS NORMALLY BOUND. IT IS A BIFUNCTIONAL PROTEIN THAT CUTS AMIDE BONDS IN THE BACTERIAL CELL WALL AND BINDS TO AND INHIBITS TRANSCRIPTION BY

T3 RNA POLYMERASE (BY SIMILARITY).

T4 RNA POLYMERASE (BY SIMILARITY).

FUNCTION: CELL WALL FORMATION.

CATALYTIC ACTIVITY: ATP + UDP-N-acetylmuramoyl phosphate + UDP-N-acetylmuramoyl-L-alanine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ocal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     glycogen.
glycogen biosynthesis; third step.
subunit: MONOMER (BY SIMILARITY).
similarity: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES,

Cells containing the tag7 DNA sequence are used to express recombinant tag7. Tag7 is used to produce and purify antibodies; to inhibit growth of mammalian tumours, especially for treating carcinoma (of liver, ovary, breast, cervix, lung, prostate, colon/rectum, bladder, testis, stomach, pancreas, mouth, head and neck, squamous cell carcinoma or teratocarcinoma), sarcoma (Kaposi's, osteo- or fibro-sarcomas), melanoma or leukaemia; and as a molecular redight marker. The tag7 polypeptide inhibits tumour growth and induces appotosis. The tag7 coding sequences are also useful as probes for gene mapping and detection of tag7 gene expression, and as primers. Antibodies against tag7 are used as reagents for detecting tag7; as an antagonist of tag7; for isolating tag7 and therapeutically to inhibit or delay tumour

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells. Increased expression of genes encoding (I) can also be detected to diagnose tumours. Agents which inhibit the activity of (I), especially the antibodies, or an antisense oligonucleotide which hybridises to genes encoding (I), can be used to inhibit tumour growth, preferably by inducing cell death. Methods from the present invention can be used to identify compounds which inhibit the biological activity of (I). AAC58103 to AAC58103 represent PCR primers and hybridisation probes used in examples from the present invention for human PRO sequences. AAC58103 to AAC5812 and AAB24021 to AAB24040 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.
                                                                                                                                                              multiple sclerosis; inflammatory disorder; inflammatory bowel disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes an antibody that binds to a human protein (I) selected from: PRO315; PRO1269; PRO1410; PRO3155; PRO197; PRO3567; PRO1925; PRO1927; PRO3567; PRO1925; PRO1927; PRO3567; PRO1926; PRO2038; and PRO2262.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antiproliferative; antiarteriosclerotic; anticancer; vulnerary; antiviral; antibacterial; and antifungal activity. The proteins, polypeptides, agonists and antagonists may be used to treat prevent and/or diagnose various disease, disorders and conditions examples of which include: immune disorders e.g. Addison's disease, rheumatoid arthritis, dermatitis, and multiple sclerosis; inflammatory disorders e.g. inflammatory bowel disease, crohn's disease and nephritis; hyperproliferative disorders such as paraproteinaemias and purpura; cardiovascular disorders e.g. coronary arteriosclerosis and myocarditis; cancer e.g. melanoma and lymphoma. The proteins and polynucleotide sequences may also be used in wound healing and the treatment of infectious diseases. The human secreted protein gene #8 and protein sequences are represented in sequences AAA806.3 and AAB25583. Sequences AAA80667 and AAB25583.
Chondrosarcoma peptidoglycan recognition protein-like protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecules encoding human secreted proteins are used for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer, wounds, and infectious diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               anti-inflammatory; antiarthritic; antirheumatic, dermatological;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              dependent on the tissues in which they are expressed. Examples
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nucleotide sequences encoding them. The polynucleotide sequences given in AAA80606-A80623 encode the 12 secreted protein sequences given in AAB25576-B25593. The human secreted proteins have various activities dependent on the tissues in which they are expressed. Examples of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (HUMA-) HUMAN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-OCT-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      27-0CT-1999;
